## Summary

`filltex` is a simple tool to fill LaTeX reference lists with records from the ADS and INSPIRE databases. ADS (“SAO/Nasa Astrophysics Data System,” n.d.) and INSPIRE (“High-Energy Physics Literature Database,” n.d.) are the most common databases used among the theoretical physics and astronomy scientific communities, respectively. `filltex` automatically looks for all citation labels present in a tex document and, by means of web-scraping, downloads all the required citation records from either of the two databases. `filltex` significantly speeds up the LaTeX scientific writing workflow, as all required actions (compile the tex file, fill the bibliography, compile the bibliography, compile the tex file again) are automated in a single command. We also provide an integration of `filltex` for the macOS LaTeX editor TexShop (“Cocoa Tex Previewer for macOS,” n.d.).
